ADDED VALUE THROUGH COMPETENCE IN IMPLANTOLOGY

A partnership with CAMLOG encompasses the exceptional price-performance ratio of the CONELOG® Products and a custom-built service program. CAMLOG's specific expertise clearly encompasses more than the product, its safety and ease of use. With all our implant expertise, we are fully committed to our customers. Rediscover the implant expertise of CAMLOG in your daily routine time and time again, and turn it into your own added value.

We are happy to help.

THE CONELOG® IMPLANT SYSTEM

SYSTEM INFORMATION

GENERAL SYSTEM INFORMATION ABOUT THE CAMLOG® AND CONELOG® IMPLANT SYSTEM

The CONELOG® Implant System is based on the many years of clinical and laboratory experience with the CAMLOG® Implant System. The CONELOG® Implant System is a user-friendly, consistently prosthesis-oriented implant system.

All CAMLOG® and CONELOG® Products are continuously fabricated based on the latest state of technology. The CAMLOG® and CONELOG® Implant System was progressively enhanced through in-house research and development in collaboration with hospitals, universities and dental technicians. Today, it represents the state of the art in implant dentistry.

The CAMLOG® Implant System is well documented scientifically. Numerous studies based on various parameters, e.g. implant surface, time of implantation and/or implant loading, primary stability, connection design or type of superstructure, support this. The long-term outcomes for the CAMLOG® Implant System are persuasive.

NEW PRODUCTS

GUIDE SYSTEM

The CAMLOG® Guide System for template-guided implant bed preparation and insertion has been extended by the CONELOG® SCREW-LINE Implants and is now called Guide System.

Guide System CONELOG® SCREW-LINE Implants are available with a 3.3 mm diameter in the lengths 9, 11, 13 and 16 mm as well as with 3.8 and 4.3 mm diameters in the lengths 7, 9, 11, 13 and 16 mm.

Newly available are guided pilot drills and a driver with ISO shaft for Guide System implants. The form drills were fitted with a four-edged cutting geometry with chip grooves to provide greater smoothness of operation. The guiding sleeves were shortened by 1 mm for minimally invasive implantation at greater gingival thickness, provided with opposing bevels for use in narrow tooth gaps and fitted with a marking to give better groove alignment. The template drills are fitted newly with a spiral-shaped cutting edge and a longer shaft. All drills, gingiva punches, insertion posts and guiding sleeves are color-coded throughout.

The new Guide System comprises 85 items.

LOCATOR®

A new replacement male is available for the Locator® Anchoring system for extended range without retention. The replacement male is colored gray and serves to adapt the cumulated retention force of a Locator® retained prosthesis on implants with diameters 3.8/4.3/5.0 mm.

CONELOG® SCANPOSTS FOR SIRONA SCANBODY

In conjunction with the Sirona Scanbodies the new CONELOG® ScanPosts serve for the digital recording of the implant position or laboratory analog position in relation to the remaining teeth and the soft tissue.

CONELOG® TITANIUM BASE CAD/CAM

In future, the Sirona inCoris ZI meso blocks can also be used with the CONELOG® Implant System. The newly modified CONELOG® Titanium base CAD/CAM, including the dark purple, anodized abutment screw and a bonding aid, will be available in the gingival heights 0.8 mm and 2.0 mm from September 2014 with a new article number.

THE CONELOG® IMPLANT SYSTEM

SYSTEM INFORMATION

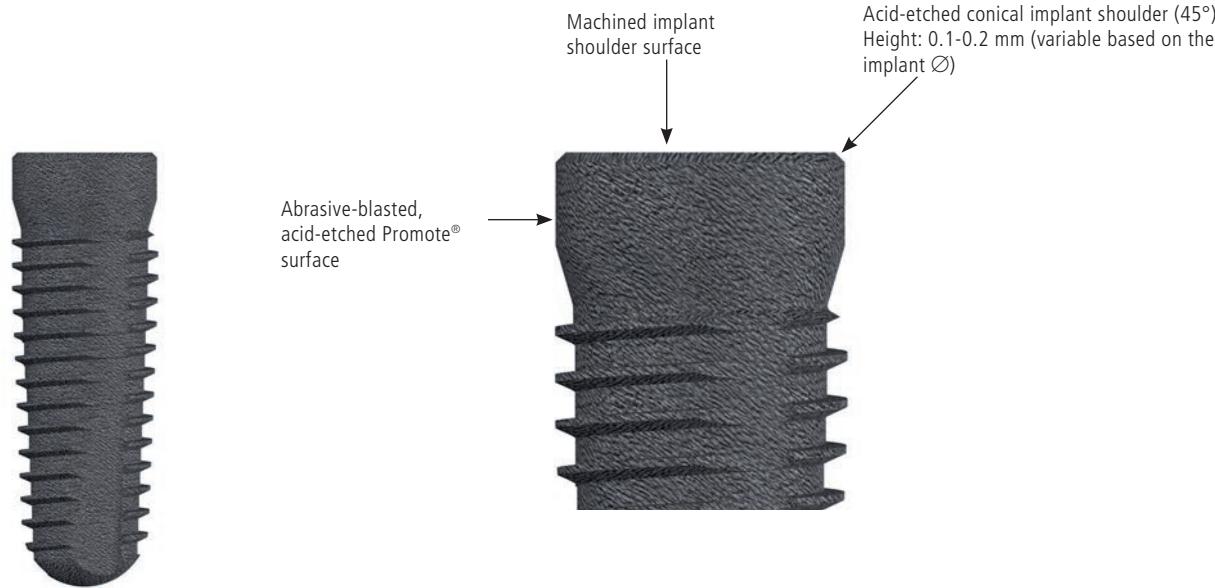

CONELOG® SCREW-LINE IMPLANTS

CONELOG® SCREW-LINE Implants are endosseous implants, available in different lengths and diameters. They are placed surgically in the maxillary and/or mandibular bone and serve as anchors for functional and esthetic oral rehabilitations in partial or fully edentulous patients. The prosthetic treatment is then completed with single crowns, bridges or full dentures, which are fastened to the corresponding CONELOG® Components with the CONELOG® SCREW-LINE Implants. Different implant sizes can be used in the same arch.

The CONELOG® SCREW-LINE Implant represents a conical self-tapping screw implant in its geometry and is available with the Promote® surface.

Implantation

CONELOG® SCREW-LINE Implants are intended as immediate or delayed immediate implants. The selected healing technique can be either submerged or transgingival. The taper of the outer implant body of 3° – 9° (depending on length and diameter) allows easy insertion due to self-centering.

CONELOG® SCREW-LINE
Implant, Promote® plus

THE CONELOG® IMPLANT SYSTEM

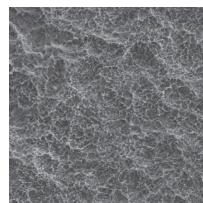

SYSTEM INFORMATION

Promote® surface

The CONELOG® SCREW-LINE Implant is available with the Promote® surface. The abrasive-blasted, acid-etched Promote® surface extends over the entire body of the implant to the acid-etched 45° implant shoulder.

The Promote® surface has proven its worth as a surface for anchoring dental implants in the bone and has shown good scientific results in osteohistology and in pull-out trials.

The results suggest that the Promote® surface leads to rapid osseointegration of the CONELOG® Implants.

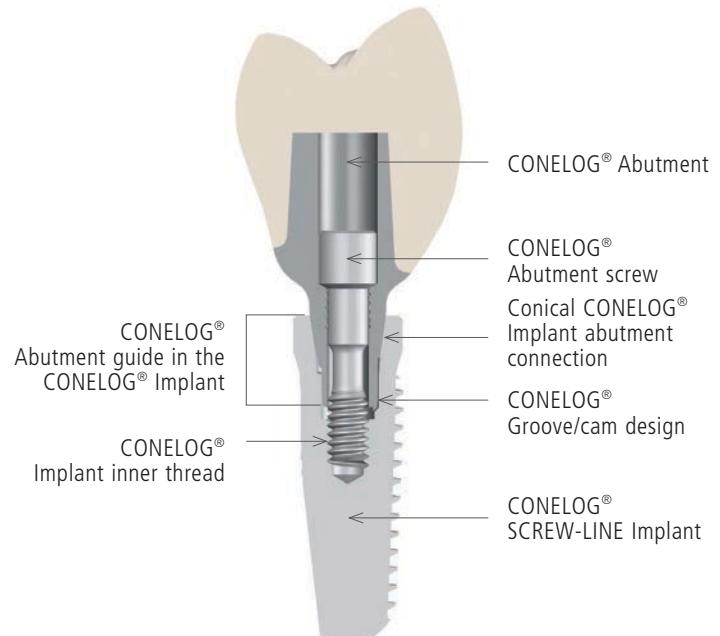

Promote® surface

CONELOG® SCREW-LINE IMPLANT INNER CONFIGURATION

CONELOG® SCREW-LINE Implants are equipped with a cone (7.5°) and three grooves in the inner configuration for positioning CONELOG® Abutments. The CONELOG® Abutments are apical with a cone and three cams, and lock into the conical connection and the three grooves of the implant. The CONELOG® Abutment does not cover the implant shoulder. A CONELOG® Abutment screw is used to fix CONELOG® Abutments in the CONELOG® SCREW-LINE Implant with a defined torque.

Conical CONELOG® Implant abutment connection

THE CONELOG® IMPLANT SYSTEM

SYSTEM INFORMATION

For optimal positioning of the abutments in the implant, they should be aligned in the bone so that one of the three grooves points vestibularly. The drivers include markings on the outside that correspond to the three grooves of the CONELOG® Implant inner configuration.

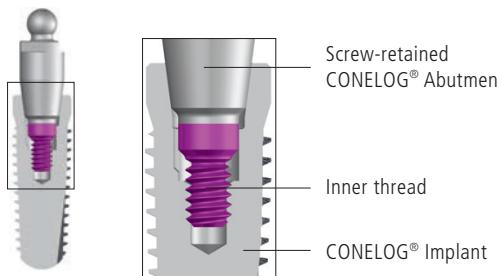

CONELOG® IMPLANT/BAR ABUTMENT/BALL ABUTMENT CONNECTION

Different CONELOG® Abutments, CONELOG® Bar abutments, CONELOG® Ball abutments, and CONELOG® Locator® Abutments with several geometries for anchoring of implant-retained full prostheses are available for the CONELOG® Implant System. These abutments differ from each other in two different connection types of their apical regions.

CONELOG® Bar, Ball and Locator® Abutments are equipped with a thread in the apical region which engages with the inner thread of the CONELOG® Implant. These abutments are screwed into the CONELOG® Implant using the corresponding drivers at a defined torque.

Due to the design of the screw connection, CONELOG® Bar, Ball, and Locator® Abutments have no cams.

Example: CONELOG® Ball abutment (\varnothing 4.3 mm) in a CONELOG® SCREW-LINE Implant

PRODUCTION PRECISION

The inner and outer geometry of the CONELOG® Implants and abutments are rotary machined for the most part. The tolerances can therefore be kept very low. The result is excellent part precision without impacting the material structure. The CONELOG® Implant abutment connection ensures a very precise, stable and rotation-resistant connection to the CONELOG® Prosthetic components.

CONELOG® SCREW-LINE Implant

CONELOG® Abutment

CONELOG® COMPONENTS

For the CONELOG® SCREW-LINE Implants, some CONELOG® Components are available such as CONELOG® Cover screws, CONELOG® Healing caps, CONELOG® Impression posts and CONELOG® Prosthetic components.

CONELOG® Cover screw

CONELOG® Healing cap bottleneck, wide body, cylindrical

CONELOG® Impression post open and closed tray

THE CONELOG® IMPLANT SYSTEM

SYSTEM INFORMATION

CONELOG® PROSTHETIC COMPONENTS

CONELOG® SCREW-LINE Implants can be provided with a pallet of wide-ranging, anatomically appropriate prosthetic components. Esthetic solutions are easily achieved. All CONELOG® Abutments are color-coded by implant diameter.

CONELOG® Temporary abutment

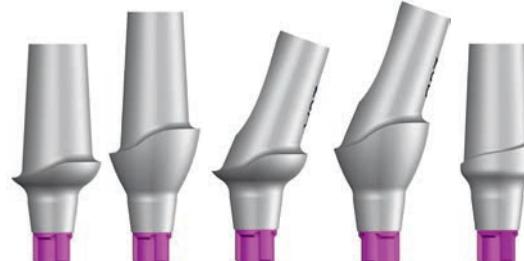

The CONELOG® Temporary abutment (titanium alloy) can be used for immediate implantation or after opening for temporary restoration.

CONELOG® Esthomic® Abutments

The CONELOG® Esthomic® Abutments include an anatomical shoulder and are available in various gingival heights.

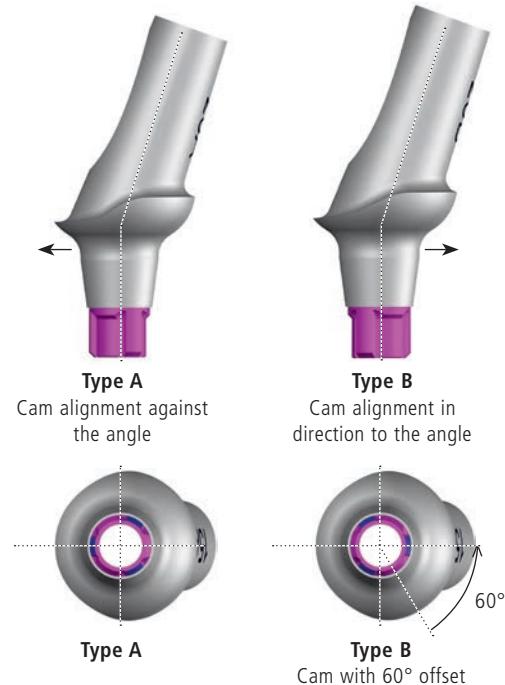

- CONELOG® Esthomic® Abutment, straight
- CONELOG® Esthomic® Abutment, 15° and 20° angled, in type A and B
- CONELOG® Esthomic® Abutment, inset

Angled CONELOG® Esthomic® Abutments, type A and B

Angled abutments type A and B are available in the CONELOG® Esthomic® Line of abutments. Type A has a cam opposing the angle direction. In contrast to type A, type B has a 60° offset cam. Both types make six different rotation positions possible to achieve an optimal prosthetic axis alignment.

CONELOG® Abutment cam alignments

CONELOG® Gold-plastic abutment

The CONELOG® Gold-plastic abutment can be used to fabricate single-crowns, individual implant abutments (mesostructures) for cementable bridge restorations and primary abutments for bridging implant axis divergences in the telescopic crown technique using the cast-on technique.

THE CONELOG® IMPLANT SYSTEM

SYSTEM INFORMATION

CONELOG® Titanium base CAD/CAM

The CONELOG® Titanium base CAD/CAM enables restorations on CONELOG® Implants with individual and highly precise two-piece abutments made from zirconium oxide, titanium or cast alloy. The base is available in the gingival heights 0.8 and 2.0 mm and is used as a bonding base for individual, implant-supported reconstructions such as mesostructures as well as crown, bridge and double-crown restorations.

CONELOG® Logfit® Abutments

The Logfit® Prosthetic System enables the fabrication of cement-retained crown and bridge restorations. The Logfit® Prosthetic System consists of color-coded CONELOG® Logfit® Abutments with two gingival heights (1.0 and 2.5 mm), Logfit® Impression caps, Logfit® Analogs and Logfit® Burn-out plastic copings with and without rotation protection for the manufacture of cast crown and bridge reconstructions.

CONELOG® Vario SR abutments

CONELOG® Vario SR abutments are available in straight, in 20° and 30° angled versions. These abutments can compensate for large implant axis divergences. Prefabricated Vario SR prosthetic components make fabrication of occlusally screw-retained crown, bridge and bar restorations possible. Burn-out plastic copings can be used to fabricate casted crown and bridge restorations. The titanium caps have a retention surface on the outside and are designed for temporary or final bridge restorations made of plastic. Titanium bases for bars are available for laser-welded bar restorations.

IMPORTANT NOTE

Because of the conical inner configuration of the CONELOG® SCREW-LINE Implants, they are only compatible with CONELOG® Components.

CONELOG® Universal and Telescope abutment

The CONELOG® Universal and Telescope abutments can be used for individually fabricated cementable crown and bridge restorations and for telescopic crown restorations. The abutments are made of titanium alloy and can be custom trimmed.

CONELOG® DISCONNECTOR FOR CONELOG® ABUTMENTS

The CONELOG® Disconnector for CONELOG® Abutments is used to remove or decouple CONELOG® Abutments from the CONELOG® Implants/Lab analogs. If the abutment does not come loose, the torque wrench (locked setting) can be placed on the disconnector and the abutment can be loosened by turning clockwise.

CONELOG® Bar-, Ball- and Locator® Abutments

For the CONELOG® Implant System, CONELOG® Bar, Ball, and Locator® Abutments are available in different gingival heights for anchoring of implant-retained full prostheses. For CONELOG® Bar abutments, there are several bases available for burn-out, cast-on, soldering, and laser-welding techniques. CONELOG® Bar-, Ball- and Locator® Abutments are perfectly suited for movable anchorings of full prostheses.

CONELOG® Bar, Ball and Locator® Abutment

THE CONELOG® IMPLANT SYSTEM

SYSTEM INFORMATION

GENERAL SAFETY INSTRUCTIONS AND WARNINGS

The descriptions in this product catalog are not sufficient to allow immediate use of the CONELOG® Implant System. Instruction by a surgeon experienced in using the CONELOG® Implant System is strongly recommended.

An improper procedure during use of the CONELOG® Products can lead to failures, implant damage, bone loss or unsatisfactory esthetic results. The products may be used only by dentists, surgeons and dental technicians trained in the implant system. Use of these products requires specialized knowledge and experience in implant dentistry. Detailed information on the choice of suitable implants, prosthetic components, treatment planning and application is contained in the user information. Your local representative will be happy to provide you with information.

Consulting and technical advice on the use of our products is provided orally, in writing, by electronic media and/or by demonstration. The provided information represents the current state of science and technology known to us at the point in time that the product is placed on the market. This does not exempt the user from the responsibility to personally test the product for suitability for the intended purpose, indication and procedure. Handling and use of the product take place outside of our control and is the direct responsibility of the user. All liability for damages resulting from such use is waived. ALTATEC GmbH/CAMLOG Biotechnologies AG does not warrant nor provide replacement services when non-system components are used.

The CONELOG® Implant System is part of a comprehensive treatment concept and must be used only with the pertinent original parts and tools according to the suggestions and instructions for use provided by the manufacturer. All components of the CONELOG® Implant System are matched precisely to one another. The use of third party components can affect the function and safety of the system.

Instruments and system components are designed for specific implant and prosthetic lines and implant diameters. Their use with any other implant or prosthetic product lines or a different diameter can lead to the mechanical failure of system components, tissue injury, or esthetically unsatisfactory results. Because of this, some implant and prosthetic product lines have some dedicated components and tools. Pay attention to the color markings when choosing instruments for the required implant diameter.

Products intended for single use must not be reused because safe preparation and/or functional safety cannot be ensured.

Within the bounds of our sales and delivery terms, we guarantee the flawless quality of our products.

Because of the small sizes involved, it may happen that a product is swallowed and/or aspirated. Aspiration can lead to dyspnea and in the worst case to asphyxiation. For this reason, products must be secured in general against aspiration and swallowing during intraoral use.

Where indications are listed for a particular product, it should be noted that any indications that are not listed are in fact contraindicated.

Sterile packaged products must be kept dry, out of direct sunlight and at room temperature. The packaging must be checked before opening for damage and the expiration date and should only be opened immediately before the products are used.

Not all products are available in all countries.

PACKAGING UNITS

If not otherwise specified, the packaging unit is 1 each.

INFORMATION MATERIALS

Titanium Grade 4

Properties (ASTM F67):

Chemical structure (in %):	O	≤ 0.4
	Fe	≤ 0.5
	C	≤ 0.08
	N	≤ 0.05
	H	≤ 0.015
	Ti	Rest
Mechanical properties:	Tensile strength	$\geq 550 \text{ MPa}$
	Elongation at break	$\geq 15 \%$

Titanium alloy Ti6Al4V ELI

Properties (ASTM F136):

Chemical structure (in %):	Al	5.5 - 6.5
	V	3.5 - 4.5
	Fe	≤ 0.25
	C	≤ 0.08
	N	≤ 0.05
	O	≤ 0.13
	H	≤ 0.012
	Ti	Rest
Mechanical properties:	Tensile strength	$\geq 860 \text{ MPa}$
	Elongation at break	$\geq 10 \%$

Cast-on gold alloy CONELOG® Gold-plastic abutment

Properties:

Chemical structure (in %):	Au	60
	Pd	20
	Pt	19
	Ir	1
Physical properties:	Melting range	1400 - 1490 °C
	Density	17.5 g/cm³
	E-Modul	136 GPa
	Coefficient of thermal expansion (25-500°C)	11.9 µm/m·°C
	Coefficient of thermal expansion (25-600°C)	12.2 µm/m·°C
	Color	white
Mechanical properties:		drawn
	Hardness HV5	> 215
	Tensile strength (Rm)	> 750 MPa
	0.2% Elongation limit (Rp 0.2%)	> 650 MPa
	Elongation at break	> 2%

INFORMATION MATERIALS

Cast-on gold alloy
Base for CONELOG® Bar
abutment

Properties:

Chemical structure (in %):	Au	60
	Pt	19
	Pd	20
	Ir	1
Mechanical properties:	Density	17.5 g/cm ³
	Color	white
	Liquidus	1490 °C
	Solidus	1400 °C
	Coefficient of thermal expansion (25-500°C)	12.5 µm/m·°C
	Coefficient of thermal expansion (25-600°C)	12.6 µm/m·°C
	E-Modul	136.000 GPa
	hardened	
	700 °C / 30 min.	
	Hardness HV5	210
	0.2 % Elongation limit	450-570 MPa
	Elongation at break	min 10 %
	Tensile strength MPa	530-650

Solderable gold alloy
Base for CONELOG® Bar
abutment

Properties:

Chemical structure (in %):	Au	70.00
	Pt	8.50
	Ag	13.40
	Pd	-
	Cu	7.50
	Zn	0.50
	Ir	0.10
	Rh	-
	Ru	-
Mechanical properties:	Color	yellow
	Melting range	895 - 1010 °C
	Hardness	
	annealed HV5	170
	hardened HV5	295
	self hardened HV5	280
